

Chicago officially records its third earliest snow of the season

Oct. 4, 2014

by [STEVE KAHN](#) Today at 8AM

This morning's chill not only brought some rain showers to the Chicago area, but also some snowflakes including an official sighting at O'Hare International Airport.

The official trace of snow that has been recorded at O'Hare is the city's third earliest on record.

The only earlier traces of snow ever recorded in Chicago dating back to the start of the city's snow climatology in 1884 were on

September 25th in 1928 and September 25th in 1942

The average date of the season's first snowflakes in Chicago is on October 30th
